

5.2 USE OF THE WILLY FONTS

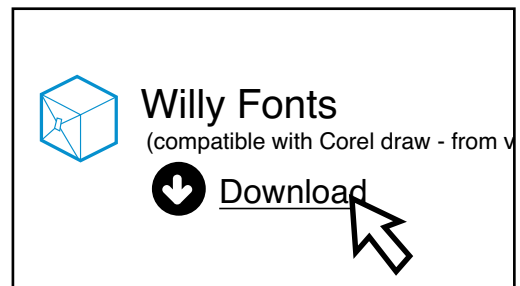

The Willy Fonts are used for making serial number before the number created with the Numerator program.

Download File from the Willy website

1. Connect to the Willy website at the address: **www.willyit.com**. Go to the **Download Area** and find the **Software for Laserlabel** section

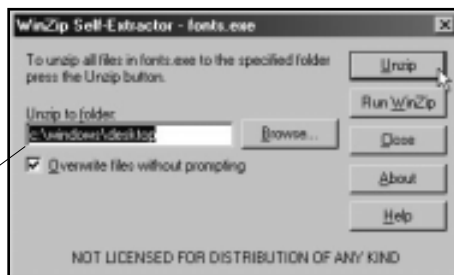

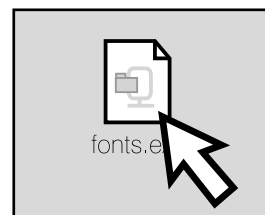

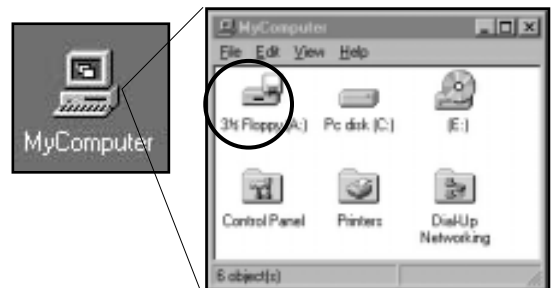

2. Select the file to download and make a click on the link **Download**.

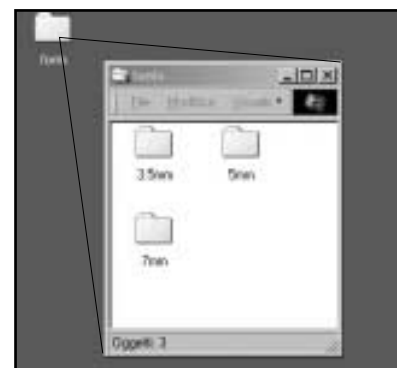

Installation from floppy disk (included in the instructions manual)

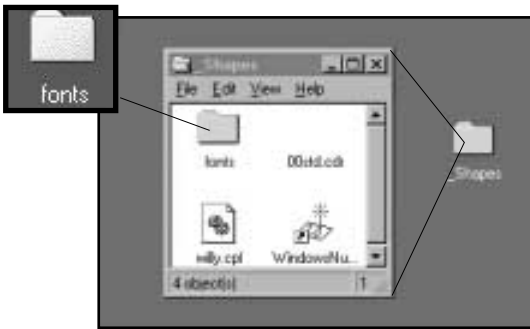

- 1- Insert the floppy named **"Fonts"** into the disk drive.
- 2- Click on the **"My Computer"**(Risorse del Computer) icon and then on the **Floppy icon**.
- 3- After downloading or copying the file into the hard disk, make a double click on the **"fonts.exe"** icon.

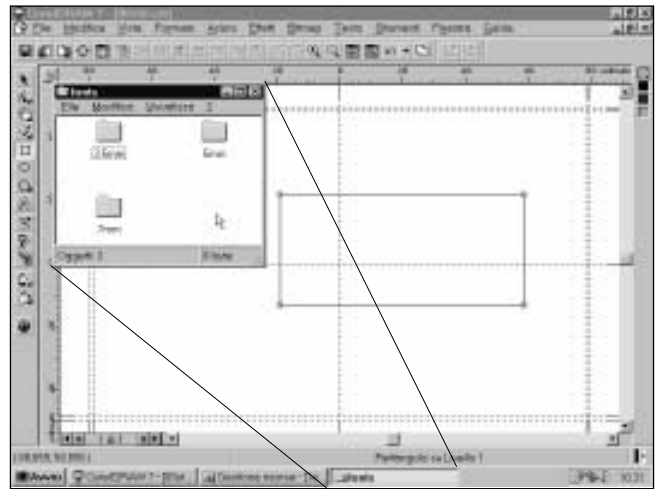

- 4- Make a click on the **UNZIP** button, to copy the fonts on the hard disk.
Attention! We suggest to leave unchanged the path indicated in the text field (1).

- 5- At the end of the process, a folder named **Fonts** will be created on the desktop. That folder contain three subfolders with the Willy Fonts in three different sizes.

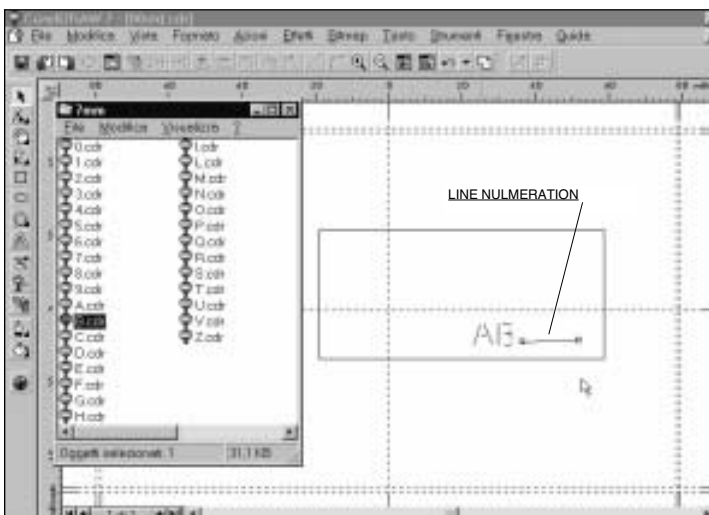

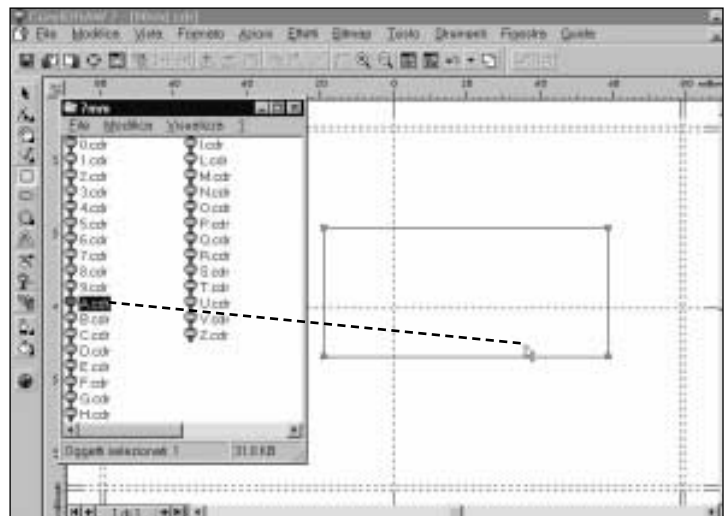

6- Put the **“Fonts”** folder into the **SHAPES** folder.

When using Corel Draw, keep the directory Shapes active on the taskbar.

To use the fonts, open the folder of the required font size.
 Select the font from the list and drag it directly into the page of Corel Draw.

Result:

- AB101
- AB102
- AB103
